IN THE UNITED STATES PATENT AND TRADEMARK OFFICE
BEFORE THE TRADEMARK TRIAL AND APPEAL BOARD

EMBARCADERO TECHNOLOGIES, INC.,

Opposer,

v.

RSTUDIO, INC.

Applicant.

Opposition No. 91193335

Applications S.N.

77/691980
77/691984
77/697987

APPLICANT'S NOTICE OF RELIANCE

Pursuant to 37 CFR §§ 2.120(j)(1); 2.120(j)(5); and 2.122(e), Applicant RStudio, Inc.

("Applicant"), by its attorneys, hereby submits through its Notice of Reliance that it will or may

rely upon and make of record with this opposition proceeding the items set forth below.

A. Specified portions of the 30(b)(6) discovery deposition of Opposer Embarcadero

Technologies, Inc. ("Opposer"), dated November 4, 2010, as well as any applicable

exhibit discussed in the specified portions. Applicant intends to rely on pp. 1-4, 12-27,

40-50, 53-54, 60-67, 70-80, and 93-98 and deposition Exhibit 6. Pursuant to the Board's

Standardized Protective Agreement, certain portions of the above referenced excerpts

have been designated by Opposer as "Trade Secret/Commercially Sensitive" and,

accordingly, have been redacted from the transcript for public filing. A Notice of

Reliance without redaction shall be filed concurrently under seal. A true and correct

copy of these excerpts from the certified transcript and a copy of the deposition exhibit

are attached hereto as Exhibit A.

B. Opposer's Amended Responses to Applicant's Amended First Set of Interrogatories,

specifically, Opposer's Response to Interrogatory No. 14. A true and correct copy is

attached hereto as Exhibit B.

C.   Chapters 19 (pp. 369-372), 20 (pp. 373-433), and 23 (pp. 463-468) of <u>R In a Nutshell: A</u>

<u>Desktop Quick Reference</u> by Joseph Adler, released in December 2009 by O'Reilly

Media Inc., 1005 Gravenstein Highway North, Sebastopol, CA 95472, upon which

applicant intends to rely to demonstrated statistical computing functions inherent in the R

computing language. A true and correct copy is attached hereto as Exhibit C.

D.   Applicant's current website (www.rstudio.org) as of April 18, 2011, upon which

Applicant intends to rely to demonstrate: (1) Applicant's current use of its RSTUDIO

trademark; and (2) Applicant's direct offering of its RSTUDIO statistical computing

software. A true and correct copy is attached hereto as Exhibit D.

E.   A collection of fifty (50) web pages which demonstrate that the term "studio" is

commonly used in the names of software products which are comparable to products

offered by the Opposer or the product offered by the Applicant. For the convenience of

the Board, a summary presenting the contents of these voluminous web pages has been

included. True and correct copies are attached hereto as Exhibit E.

G. A portion of Opposer's website (www.embarcadero.com) which lists software products

   sold by Opposer, including those branded with the ER/STUDIO mark at issue in this

   proceeding, which demonstrates how Embarcadero categorizes its various products. A

   true and correct copy is attached hereto as Exhibit G.

H. A portion of Opposer's website (www.embarcadero.com) which lists the current prices

   charged as of April 19, 2011 for various ER/STUDIO products. A true and correct copy

   is attached hereto as Exhibit H.

I. A Wikipedia article titled "Comparison of Statistical Packages" that lists a number of

   statistical software packages and their various features and which is demonstrative of the

   statistical computing software category as it exists in commerce. A true and correct copy

   is attached hereto as Exhibit I.

Respectfully submitted,

RSTUDIO, INC.,

Perl Dev Kit

Turn your Perl programs into ready-to-run executables for Windows, Mac OS X, Linux, Solaris*, and AIX*. Generate executables for non-native platforms. Run a set of coding policies against your source code to ensure your code conforms. Painlessly debug Perl scripts. Generate code for sophisticated filters, or convert useful VBScript code to Perl. Plus create .NET and ActiveX components, Windows services and system tray applications, all written in Perl.

Learn more about Perl Dev Kit.

ActivePerl Community Edition

ActivePerl Pro Studio includes download access for ActivePerl Community Edition, a commercial-grade language distribution ideal for community developers with open source projects. Need support, building critical applications or redistributing ActivePerl? You may need a different license. Compare ActivePerl Editions to determine which version is right for you.

Safari Books Online

Safari Books Online is the premier electronic reference library for programming and IT professionals. Safari provides access to the electronic versions of over 3700 technical books from leading publishers.

With Safari access, ActivePerl Pro Studio members can search the entire Safari library in a matter of seconds to pinpoint precisely the piece of information or code fragment they need. Users can even filter searches to include "code fragments only."

Learn more about Safari Books Online.

Subscribe

ActivePerl Pro Studio is offered by annual subscription. Your easy-to-budget subscription bundle include permanent software licenses for the latest release of Komodo IDE and Perl Dev Kit, all updates and upgrades, and one year's access to Safari Books Online.

The first year subscription to ActivePerl Pro Studio is $495. Annual renewals are $245 US (if purchased within 30 days of the subscription expiration date).

For Perl development teams, ActivePerl Pro Studio is available in packs of five for $1,995 US.

Please email sales@activestate.com for a custom quote if you require 30 or more subscriptions.

Upgrade to ActivePerl Pro Studio

Back to work special!

Already own Komodo or Perl Dev Kit? Want to upgrade to Pro Studio?
Save $50 on upgrades to Pro Studio through September 30, 2010.

Upgrade now from only ~~$295~~ $245 US through My Account.
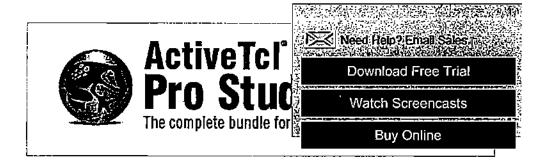

Subscription expiring? Renew your subscription now through My Account.

*PerlApp cross-platform wrapping targeting Solaris, AIX may require an ActivePerl Business Edition license.

* **If you renew prior to your expiration date, you save 10%. Renew now for only $220.50 US.**

Komodo IDE is designed for small and diverse developer teams.

Learn more about Komodo IDE.

Tcl Dev Kit

Professional suite of essential tools for Tcl programmers (originally based on TclPro), making it easier to build and deploy applications. Provides essential tools for Tcl programmers, making it easy to create, build and deploy applications. Rapidly deploy Tcl applications to a broad range of platforms, as ready-to-run executables, starkits or starpacks. Simplify development with tools for finding and fixing bugs, managing complex code bases, and optimizing your programs. Take control and work the way you want with a choice of GUIs or command line interfaces for most tools.

Aqua Data Studio 9.0 beta   New Features in 9.0... [View New Features]   🖥 [Application Videos]

Aqua Data Studio is a complete Integrated Development Environment (IDE) for database administrators, software developers and business analysts. It provides four major areas of functionality: 1) Database query and administration tools; 2) a suite of compare tools for databases, source control and file systems; 3) a complete and integrated source control client for Subversion (SVN) and CVS; and 4) a database modeler as powerful as the best standalone database diagramming tools.

OS Support: * ADS for Windows * ADS for Linux * ADS for OSX * ADS for Solaris * ADS for Java Platform

RDBMS Support: (Oracle · 11g, 10g, 9i, 8i) (DB2 iSeries V5R3, V5R4, V6R1) (DB2 LUW · 9.7/9.x/8/7) (DB2 z/OS · V8/V9) (MS SQL Server · 2008/2005/2000/7/MSDE) (Sybase ASE · 15/12.x/11.x) (Sybase Anywhere · 11/10/9/8) (Sybase IQ · 12.x, 15) (Teradata 12) (Aster nCluster 4.0) (Informix IDS · 11.x/10/9.x/7.x) (PostgreSQL · 8.4/8.x/7.x) (MySQL · 5.x/4.x/3.x) (Apache Derby 10.x) (Generic JDBC Platform) (Generic ODBC)

Download ADS
Windows · Linux · OS X · Solaris
(or right-click)

Scriptable Charts - Gallery

Database IDE: The database query and administration tools allow developers to easily create, edit, and execute SQL scripts, as well as browse and visually modify database structures. Aqua Data Studio provides an integrated database environment with a consistent interface for all major relational databases. This allows the database administrator or developer to tackle multiple tasks simultaneously from a single application.

Query...	**Query Tool**
SQL History... Start Data...	**SQL History/Archive**
Debug in Pr... Procedure F...	**SQL Debuggers**
Format Cun... Format Scr...	**SQL Formatter**

Version Control: Integrated version control provides a complete client for Subversion and CVS repositories, allowing you to manage all source control repositories within one easy-to-use IDE using the Repository Browser.
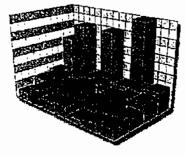

Update, Commit	**Subversion (SVN)**
Update Commit	**CVS**

Compare Tools: The suite of compare tools in Aqua Data Studio allows you to view the differences of RDBMS servers, databases and schemas for database tasks with ease. You can further compare the differences of files, directory structures, source control files and full revisions.

Schema Co... Tab Com...	**Database Schema Compare**
Results Com...	**Query Results Compare**
Directory C... File Com...	**Directory Compare**
File Compar... Copy Com...	**File Compare**

Database Modeling: The Entity-Relationship Modeler vastly reduces development time and increases understanding of database schemas and relationships. You can create, explore, detail, and modify database schemas to create fully editable and scriptable diagrams of database relationships and objects.

ER Modeler Wr... New	**ER Modeler**

AVR Studio 4

AVR Studio 4 is the Integrated Development Environment (IDE) for developing 8-bit AVR applications in Windows NT/2000/XP/Vista/7 environments.

AVR Studio 4 provides a complete set of features including debugger supporting run control including source and instruction-level stepping and breakpoints; registers, memory and I/O views; and target configuration and management as well as full programming support for standalone programmers.

AVR Studio 4 features

- Integrated Assembler
- Integrated Simulator
- Integrates with GCC compiler plug-in
- Support for all Atmel tools that support the 8-bit AVR architecture, including the AVR ONE!, JTAGICE mkI, JTAGICE mkII, AVR Dragon, AVRISP, AVR ISPmkII, AVR Butterfly, STK500 and STK600
- AVR RTOS plug-in support
- support for AT90PWM1 and ATtiny40
- Command Line Interface tools updated with TPI support
- Online help

圉 ☺   AVR1016: AVR Training QTouch Xplained(Application Note, 18 pages, revision A, updated 5/10)

14:22:04 PM Thursday, September 16, 2010 http://www.atmel.com/dyn/products/tools_card.asp?tool_id=2725

The purpose of this training is to get familiar with the Atmel QTouch Library 4.0 and how to use it in your own applications.

AVR1500: Xplain training - XMEGA Basics (Application Note, 16 pages, revision A, updated 8/10)

This Application Note will get you started with Atmel® AVR® XMEGA™ basics, using the IO ports to show various concepts in four tasks. You will learn to use small code fragments, utilizing the XMEGA header files and some of the XMEGA features for more efficient and compact code.

AVR1501: Xplain training - XMEGA Timer/Counter(Application Note, 15 pages, revision A, updated 8/10)

This Application Note will get you started with Atmel® AVR® XMEGA™ timers, PWM generation, High resolution Extension, Advanced Waveform extension and many other features of the high-end and very flexible XMEGA 16-bit Timer/Counters.

AVR1502: Xplain Training - Direct Memory Access Controller(Application Note, 10 pages, revision A, updated 8/10)

This Application Note will get you started with Atmel® AVR® XMEGA™ Direct Memory Access Controller (DMAC). You will learn to perform simple memory transfers almost without using CPU time, and reading and writing to peripherals with hardly any CPU intervention.

AVR1503: Xplain training - XMEGA Programmable Multi Interrupt Controller(Application Note, 7 pages, revision A, updated 8/10)

This Application Note will get you started with Atmel® AVR® XMEGA™ advanced Programmable Multi-level Interrupt Controller (PMIC) which allows control over interrupt priorities and scheduling of interrupts.

AVR1504: Xplain training - XMEGA Event System(Application Note, 15 pages, revision A, updated 8/10)

This Application Note will get you started with Atmel® AVR® XMEGA™ Event System which allows inter-peripheral communication, enabling a change of state in one peripheral to automatically trigger actions in other peripherals, without any use of interrupts or CPU and DMA resources.

AVR1505: XMEGA training - ADC(Application Note, 11 pages, revision A, updated 8/10)

This Application Note will get you started with Atmel® AVR® XMEGA™ ADC which has an optional gain stage and is capable of 12-bit resolution and 2 million samples per second (MSPS), single-ended or differential measurements, signed or unsigned results.

AVR1506: Xplain training - XMEGA clock system(Application Note, 12 pages, revision A, updated 8/10)

This Application Note will get you started with Atmel® AVR® XMEGA™ clock system which supports a large number of clock sources, oscillators, PLL, prescalers, a calibration system and clock monitoring. More details of the XMEGA clock system are also available in AVR1003.

AVR1507: Xplain training - XMEGA Crypto Engines(Application Note, 11 pages, revision A, updated 8/10)

This Application Note will get you started with Atmel® AVR® XMEGA™ powerful hardware support for encryption algorithms. Details of the mathematics behind the DES and AES algorithms are beyond the scope of this application note and will not be covered.

AVR1508: Xplain training - XMEGA DAC(Application Note, 11 pages, revision A, updated 8/10)

This Application Note will get you started with Atmel® AVR® XMEGA™ Digital to Analog Converter (DAC) which is capable of 12-bit resolution and 1 million samples per second (MSPS).

AVR1509: Xplain training - Low Power(Application Note, 12 pages, revision A, updated 8/10)

This Application Note will get you started with Atmel® AVR® XMEGA™ various sleep modes and software controlled clock gating which allow to tailor power consumption to the application's requirement.

AVR1510: Xplain training - XMEGA USART(Application Note, 10 pages, revision A, updated 8/10)

This Application Note will get you started with using Atmel® AVR® XMEGA™ USART (Universal Synchronous Asynchronous Receiver Transmitter) in polling mode, interrupt mode and how to use the DMA Controller to transfer data without CPU interaction.

Software

QTouch Library 4.3 (21 MB, revision 4.3, updated 7/10)

AVR Studio 4.18 SP2 (b700) (28 MB, updated 2/10)

New device support since the release of AVR Studio 4.18:
See Release Notes 4.18 SP2 for more details.
AVR Studio 4.18 SP1 (build 692) (28 MB, updated 12/09)

New device support since the release of AVR Studio 4.18:
See Release Notes 4.18 SP1 for more details.
AVR Studio 4.18 (build 684) (116 MB, updated 11/09)

AVR Studio 4.18 includes new device support and numerous overall enhancements;
QT600 support in programming dialog in AVR Studio, AVR Dragon support for all AVR 8-bit devices including XMEGA, Programming and debugging within AVR Studio, command line software support for ELF production file format and button for starting AVR32 Studio.

AVR LCD Visualizer (1 MB, revision 1.0, updated 02/04)   RS562

14:22:04 PM Thursday, September 16, 2010 http://www.atmel.com/dyn/products/tools_card.asp?tool_id=2725

Create and modify your own LCD displays with the editor, debug and visualize inside AVR Studio 4. Run-time update with ICE50 and Simulator. Supports ATmega169. Minimum requirement: AVR Studio 4.07. Remove old LCD plug-ins before installing.

Accelerate Web Development with professional Web Application Generator (create dynamic Websites like this one with minimal coding)

CodeCharge Studio is the leading and most productive solution for visually creating database-driven Web applications with minimal amount of coding. The support for virtually all databases, web servers and web technologies makes CodeCharge Studio one of a kind. It is a complete solution available for Web development.

Whether you are a legacy developer, MS Access programmer or experienced Web engineer, you can use CodeCharge Studio to rapidly develop anything from simple database-driven Web applications to complex e-business solutions.

The included Application Builder instantly converts your database (MS Access, MS SQL, MySQL, Oracle, etc.) into a working Web application with login-protected user access to database search, list, view and update functions.

CodeCharge Studio delivers the speed of code generation integrated with a full featured, powerful IDE. You can quickly generate dynamic, bug-free web sites in PHP, ASP, JSP, Perl, ColdFusion, ASP.NET. And then edit and customize your applications using the Studio's powerful code editors.

What's more, you can use any HTML editor to modify the HTML+CSS Website designs created by CodeCharge Studio.

Features

Visual IDE and Code Generator
Rapidly build web applications by generating robust, scalable programming code in ASP.NET (C#), ASP, PHP, Java Servlets, JSP, ColdFusion and Perl.

Database-to-Web Converter
Convert any database into a Web application in just a few minutes.

MS FrontPage® Add-In
Transform Microsoft® FrontPage® into a powerful Web development environment.

Pre-built Solutions

Benefits

Reduce Development Time
Eliminate time-consuming programming tasks and build scalable, robust Web Applications in a fraction of the time.

Minimize Errors
Avoid costly programming errors and misspellings by generating consistent, well-structured code.

Reduce Learning Curve
Analyze and modify generated code to learn web technologies and take on programming projects in any environment.

Sample Applications

Flash Charts and Flash Chart Builder

Flash Chart Builder provides a visual method for designing and including Flash charts within a Web page. The Flash Chart component retrieves data from the database at run-time and
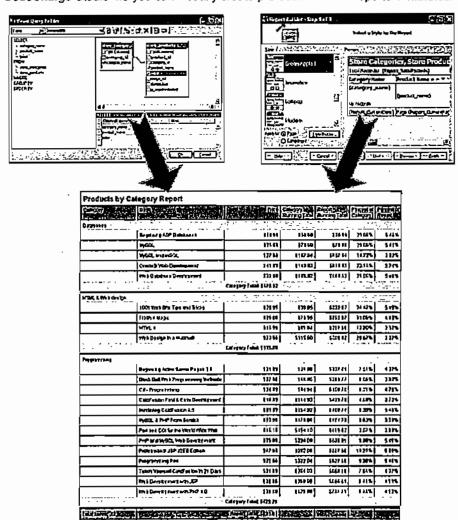

presents it as a visual graph.

Web Reporting

Creating Web reports has just become a whole lot easier for PHP, ASP.NET, ASP, Java, ColdFusion and Perl developers.

With CodeCharge Studio 4.3 you can visually create professional Web reports in minutes.

Web Calendar Builder, CSS Style Builder, Internationalization are just some of the other new features in CodeCharge Studio 4.3.

- Informational/Product Website: www.ultraapps.com
- Community Website: www.jeepskiing.com
- Thousands of Corporate Sites and Intranet Portals

Click here to view Flash demo showing how easy it is to create your first Web application.

Companies using CodeCharge Studio
In addition to tens of thousands of individual Web developers and consultants, CodeCharge Studio is used at such respectable organizations as:

- AT&T
- Bank One
- BF Goodrich
- Commerce Bank
- Commonwealth Bank Australia
- Countrywide
- Deutche Bank
- EDS
- Embarq/Sprint
- Federal Reserve Bank
- Home Savings Bank
- IBM
- Intel
- MCI
- Suntrust Bank
- US Army
- US Department of Defense
- US Department of Justice
- US Department of Veterans Affairs
- US Fish and Wildlife Service
- US House of Representatives
- US Navy
- Sun Microsystems
- Verizon
- Various city governments, schools, DMV departments, etc.
- Thousands more...

Technologies supported by CodeCharge Studio

- Web technologies: PHP, ASP.NET/C#, ASP.NET/VB, Perl, ColdFusion, Java Servlets, JSP.
- Databases: MySQL, MS SQL Server, MS Access, PostgreSQL, and all others that support Web connectivity.
- Web Servers: ALL Web servers are supported, including Apache, IIS, etc. on all platforms (Windows, Linux, Mac)
- CodeCharge Studio itself runs on Windows XP, 2000, 20003 and Vista

CODECHARGE STUDIO FEATURE OVERVIEW

Integrated Development Environment (IDE)

Integrated editors:

- *Visual page designer:* to design pages graphically.

- *HTML editor:* to edit your HTML & JavaScript with color syntax coding.
- *Code editor:* with auto-indent and color syntax coding.
- *Page preview:* for local viewing of templates.
- *Live data viewer:* for instantaneous viewing of pages with live data locally or on your server.

Project navigation:

- *Project Explorer:* provides a comprehensive view of all project pages, code, included files and media assets.
- *Code Explorer:* lists each object on the page and provides instant access to related code.

Precision controls:
Property inspector provides precise control over the properties of every page and page element:

- *Format:* to set format and styles.
- *Data:* to control data sources and security.
- *Events:* to program events and insert custom actions.

Drag-and-drop objects:
Drag-and-drop objects allow you to visually create pages in the Designer that include:

- *HTML Elements:* for all HTML tags and objects.
- *Controls:* to add data-aware labels, links and navigation.
- *Components:* to add sophisticated data-driven groups of integrated controls such as grids.

Integration with HTML editors:
CodeCharge Studio includes special integration features to work seamlessly with your favorite HTML editors.

- *Microsoft® FrontPage® Add-In:* The first product to extend FrontPage® functionality into a full-featured, integrated development environment, CodeCharge Studio allows developers to generate professional quality code in all popular server-side programming languages and offers a professional code editor to extend and fine-tune generated code.
- Macromedia® Dreamweaver®, Adobe® GoLive® and other HTML editors-Use virtually any program as your HTML editor in CodeCharge Studio. Set that program as your primary HTML editor CodeCharge will seamless use the program for HTML editing.

Language, Server and Database Support

- *Languages:* Supports ASP.NET 1.0, 1.1 and 2.0 (C# and VB.NET), ASP/VBScript, JSP, Java Servlets, ColdFusion 4.0 and MX, PHP 4, PHP 5 and Perl 5.0.
- *Application servers:* Supports industry-standard servers including Apache, Microsoft IIS, Macromedia ColdFusion, IBM WebSphere, BEA WebLogic, and Netscape Enterprise Server.
- *Site publisher:* publishes the project to the sever with a single click.
- *Databases:* Data Source wizard-speeds connectivity to virtually any database including: Microsoft SQL Server, Oracle, DB2, MySQL, and Microsoft Access. Supports access to multiple databases simultaneously. Visual query builder creates SQL queries without coding.

Productivity Features

Powerful wizards CodeCharge Studio's sophisticated component and application wizards automate the most common application interactions with a simple point-and-click interface:

- *Application Wizard:* creates a multi-page application supporting user queries and administrator updates based on your database structure.
- *Component Wizards:* generate sophisticated search, grid, login/logout, and record update components and pages automatically.
- *Code generation:* CodeCharge Studio generates your code on the fly using the CodeCharge code generation engine. The code is architected according to industry-wide

best practices, easily extensible, and highly reliable. The engine automatically separates HTML pages from code logic, improving workflow and isolating changes to design, programming and deployment. Sites are faster to develop and easier to maintain because designers and programmers can focus on their respective responsibilities without affecting each other.

- *Security management:* CodeCharge Studio's integrated security management simplifies multi-level security.
- *You define the privileges:* Full, Read, Insert, Update or Delete-for each security group or user, and CodeCharge automatically includes the appropriate authentication code to link username and passwords to security level and privileges.
- *Jumpstart solutions:* CodeCharge Studio includes several pre-built and functional applications so you can see real CodeCharge-generated solutions in action. Copy and paste the code into your application or study how the experts did it.
- *Customizable Styles:* CodeCharge Studio includes many customizable styles using CSS or HTML tags so you can generate professionally designed Websites or support any corporate presentation standard.

Overview

Learn more

- Features & benefits
- Getting Started manual: OPL and IDE
- Getting Started manual: CPLEX Optimizer
- Getting Started manual: CPLEX CP Optimizer

**CPLEX Optimization Studio speeds development and deployment of optimization models, combining leading
solver engines with a tightly integrated IDE and modeling language.**

Speed development and deployment of optimization models, using linear/quadratic, mixed integer, and constraint
programming and constraint-based scheduling. Ensure reliable development and maintenance using a transparent
modeling language and intuitive tools for model testing, profiling, and tuning.

- Solving with mathematical programming: Complete access to a powerful MP solver through the IDE, API, or via
  third party applications.
- Solving with constraint programming: Access to an outstanding and proven CP solver as well, through the IDE,
  API, or via third party applications.
- Modeling: Create optimization models and extend optimization algorithms using the OPL modeling language, the
  ILOG Concert APIs, or numerous other interfaces and connectors.
- Developing: Develop, debug, test, and tune analytical decision support applications.
- Deploying: Deploy analytical decision support applications.

Develop an IVR, Voice Mail or Call Center Application in Minutes

CT Developer Studio 2 is a Windows software that helps you quickly implement a professional voice response system into your business. Developing IVR solutions is easy with Visual IVR Script Designer and the many ready-to-use samples supplied with the product.

Several demonstration templates and ready-to-use IVR systems, including a voice mail server, inbound call center, automatic dial-out notification system, order processing system, and many more, are supplied with CT Developer Studio. If you need your IVR system right away, you can modify the details of one of the templates to tail it to your requirements. You can quickly design your own IVR system by using the Visual IVR Script Designer. All call details and caller responses are logged in the CSV and XML formats, making it easy to import to MS Office applications.

CT Developer Studio 2 requires a **PC** with a compatible telephony board. Click for complete list of system requirements. Currently, the following boards are supported:
- **Ai-Logix** - SmartWorks 3.5.2
- **NMS** - 2005-1
- **Intel/Dialogic** - Dialogic SR 5.1.1 (with Service Pack 1)

Download Evaluation Version

Computer Telephone Integration at a Glance

CTI (Computer-Telephone Integration) enables the connection of telephone systems with computers by enabling telephones and personal computers to work in sync. Low cost 2-line and 4-line voice boards and easy to use visual IVR script designers make it possible for even smaller businesses to deploy customized voice answering systems tailored to their exact needs. This technology can be used create various applications, such as:

CT Developer Studio effectively enables you to easily develop and implement any of these systems on a Windows PC.

Your IVR System Grows as Your Business Expands

Designing an IVR system has never been easier. Design your IVR system with the TeleFlow Visual IVR Script Designer by simply dragging and dropping the components required to design a perfect response system just for your needs.

What is CT Developer Studio 2?
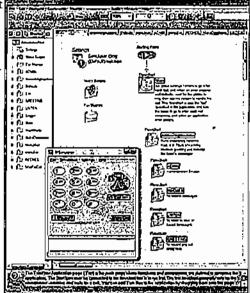

CT Developer Studio 2 is an IVR development software that will help you develop, implement and host your IVR system. It is based on TeleFlow IVR engine by enGenic, and supports up to several hundred telephone lines simultaneously. CT Developer Studio consists of several parts.

- **TFMonitor**

    Runs on a PC, executing IVR scripts that are using the telephone lines to handle incoming and make outgoing calls.

- **TeleFlow Visual IVR Script Designer**

    Allows fast and easy design of the IVR system. Simple IVR blocks are dropped from the Toolbox on the Workspace, their Properties are edited in a Visual Studio.NET fashion, and then Event Handlers are specified, linking the modules to one another depending on the tone keys the caller pressed.

CT Developer Studio 2 allows for unlimited number of voice mailboxes (click to enlarge)

- **TeleFlow Simulator**

    Allows testing your IVR scripts on a PC without actual telephony hardware connected to it. Develop, debug, test and evaluate your voice response scripts without investing in expensive hardware!
    Download Evaluation Version

TeleFLow Visual IVR Script Designer

Allows fast and easy design of an IVR system. Visual IVR Script Designer is easy to learn, and allows a complete GUI for the whole IVR development process.

A list of simple IVR blocks is available on the toolbox. These blocks can be dragged and dropped on the workspace. Each block has Properties and Event Handlers (similar to MS Visual Studio.NET).

Edit Event Handlers to link the modules to one another depending on the tone keys the caller pressed.

TeleFlow Visual IVR Script Designer

Visual IVR Script Designer is build in a modular fashion. It contains the following modules that are used as simple 'bricks' to build your IVR system:

provides a convenient tool for designing and debugging an IVR system (click to enlarge)

Get Numbers	Say Number
Play File	Record File
Send Email	Query Database
Voice Mail	Dial Number
Run VB Script	Run JavaScript
Read Text	Transfer Call
Evaluate Expression	Run Program
Send Phone Message	Generate DTMF tones

Multiple events are available for each block so that you can create different connections between the modules depending on the user's input.

It is easy to add a custom IVR block to the script designer; a complete developer's API is available with the product. The API is simple and well documented, with a sample extension module available in source.

Voice Mail

The voice mail functionality is available with a pre-made "Answering Machine" script. To create a completely functional voice mail system open the "Answering Machine" sample project and set up your mailboxes and messages.
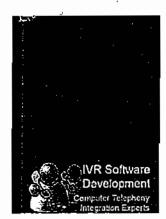

The Voice Mail supports:

- Easy creation and deletion of voicemail boxes
- Selecting or recording unique greeting messages
- Voice mail message management
- Call transfer and email forwarding for each mailbox
- Remote access to voice mail messages

The number of mailboxes is not limited in CT Developer Studio.

Feature List

- Unlimited voice mail boxes featuring call transfer, remote access, email notification and forwarding
- Supports unlimited number of telephone lines
- Dynamically configures or changes IVR scripts for each telephone line
- Complete online or telephone remote control
- DTMF tone generation and recognition gives ability to enter numbers
- Full Caller ID compliance
- Telephone line emulator included for off-line testing of your IVR scripts
- Call transfer to other phone numbers or extensions (requires a PBX or activation of your phone company feature)
- 3-way calling, optionally playing back or saying any information, allowing the recipient to accept or decline the call (subject to your phone company features)
- Email forwarding of highly compressed voice messages
- Dialer module can dial phone numbers and run an IVR script once the call is answered
- Music-on-hold
- Text-to-speech and Speech Recognition (in certain editions)
- Database access integrated with text-to-speech
- Can execute other programs, transferring data to and from an external application
- Full logging of all call details and all selections made during the call
- Pre-recorded voice prompts in multiple languages
- IVR script templates for many of the typical IVR tasks

Datafeed Studio

Datafeed Studio is a self-hosted web application for **internet marketing** professionals that need to create multiple types of product driven **affiliate web pages** with ease.

Master your Products

With **Datafeed Studio** you can merge all your affiliate datafeeds (even from different networks) into one single product database that you control.

From this database you can easily create standalone **affiliate web stores** or embed **price comparison widgets** within your existing web sites.

Above: The Datafeed Studio admin interface

Easy as 1-2-3

1. Install **Datafeed Studio** on your Web Server.
2. Add datafeeds from your favourite merchants.
3. Configure the site(s) you want - such as a **niche online store**, a **price compare site**, etc. (*or* use Datafeed Studio as your very own content unit engine for serving up price widgets to existing websites!).

Features

- **NEW!** - Web Service API access to Amazon, Affiliate Window (Shop Window), LinkShare and CJ - no feed files required!
- Add Content Pages / Blog Posts with built-in **WYSIWYG editor,** making Datafeed Studio a great affiliate CMS.
- Built-in datafeed parsers for **affiliate networks** such as Affiliate Window, BuyAt, Paid on Results, Share-A-Sale, TradeDoubler and WebGains - or easily create your own.
- Accept moderated **product reviews** from your site visitors.
- **Theme Support** - built-in editor allowing you to easily customise the presentation of your site(s) and price boxes.
- **Automated** refresh of datafeeds.
- Override merchant product information with your own **custom content.**
- Easily display product content units in your blogs using the included **Wordpress datafeed plugin** or integrate with your existing applications using the PHP API.

See full list of features.

Example Datafeed Studio Sites
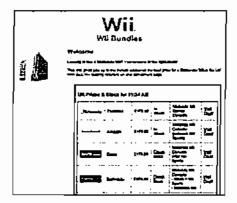

- Indiana Jones Toys (Store, "modern" theme)

- Deal Drop (Price Compare Site, "default" theme)

- Wii Bundles (Existing site using Web Services + PHP API)

- DMR BS850 (Wordpress site using Datafeed Studio plugin 'category' style Price Box)

Whether you want an **affiliate store, a price compare engine,** or just standalone price comparison **landing pages for PPC campaigns, Datafeed Studio** is the perfect solution to all your affiliate needs.

Order Now

Upgrade your Free Edition with more sites, more feeds!

Online Demo

Want to try the Datafeed Studio **online demo?**

Free Download

Download a **Full Version** of Datafeed Studio today! It's free!

Supported Networks

Built-in support for the following networks :

LinkShare

paid on results

SHAREASALE

// silvertap

TradeDoubler

webgains

Your favourite not listed?
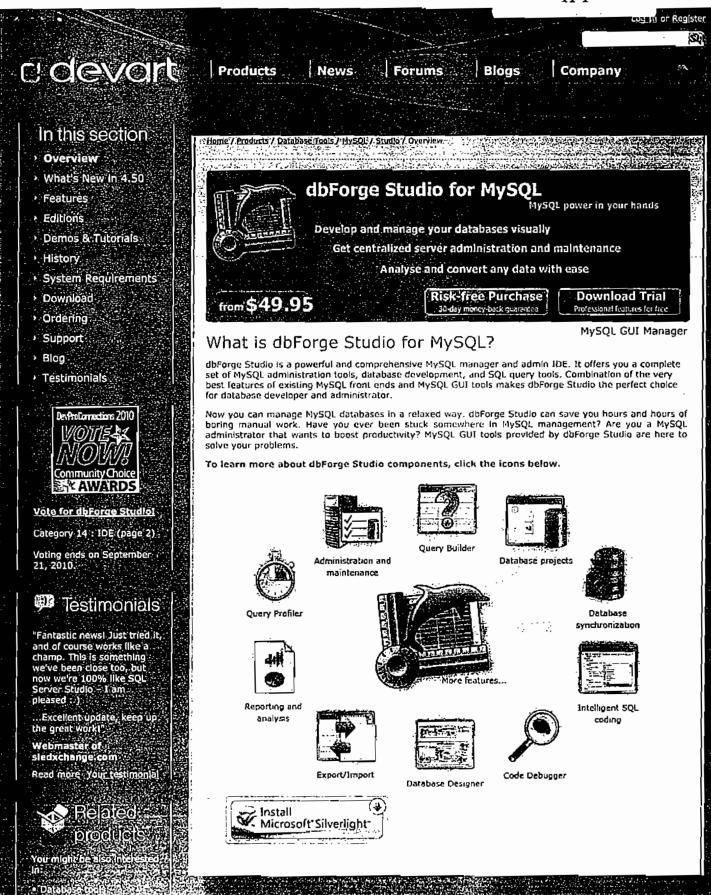

Don't Panic! - you can easily add custom datafeed formats yourself!
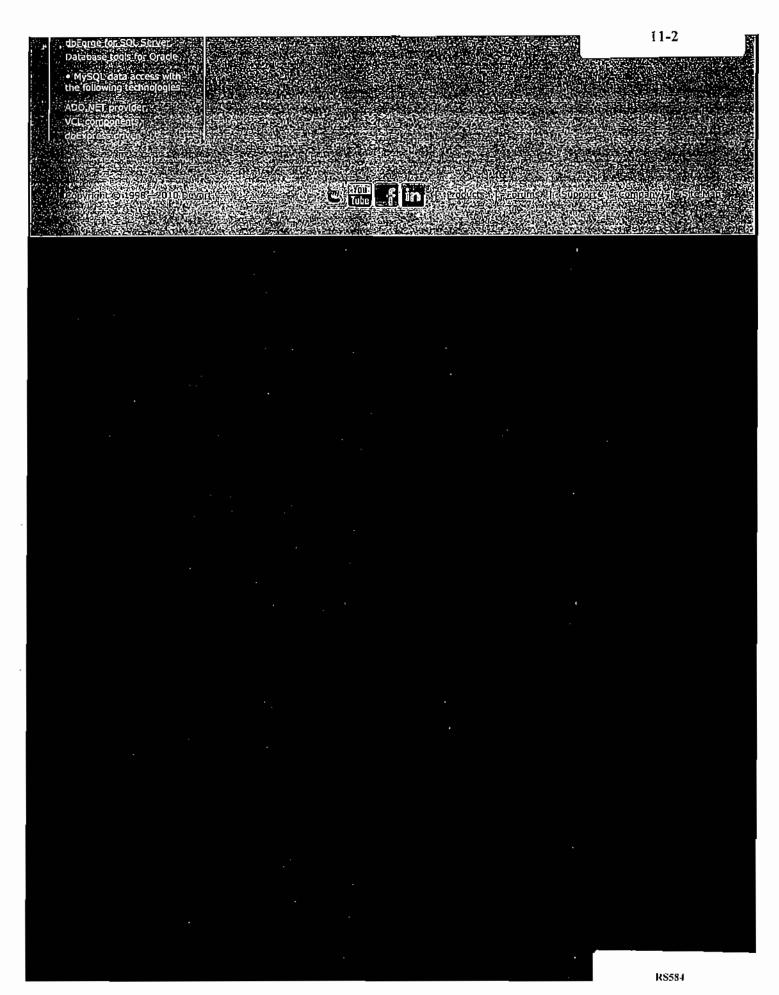

System Requirements

- Linux/UNIX based Web Server
- Apache web server (with mod_rewrite enabled)
- MySQL 4.1 or above
- PHP **5.0** or above (with curl and mysqli extensions enabled)

Really happy with Datafeed Studio - it is a great product and well worth the money.
- *Steve Sims*

MySQL GUI Manager

What is dbForge Studio for MySQL?

dbForge Studio is a powerful and comprehensive MySQL manager and admin IDE. It offers you a complete set of MySQL administration tools, database development, and SQL query tools. Combination of the very best features of existing MySQL front ends and MySQL GUI tools makes dbForge Studio the perfect choice for database developer and administrator.

Now you can manage MySQL databases in a relaxed way. dbForge Studio can save you hours and hours of boring manual work. Have you ever been stuck somewhere in MySQL management? Are you a MySQL administrator that wants to boost productivity? MySQL GUI tools provided by dbForge Studio are here to solve your problems.

Developer Studio Overview

Developer Studio is a collection of development-only, non-expiring data visualization solutions for the .NET, COM and Java platforms. This package includes all of the current Chart FX and Grid FX product line and allows for a convenient and flexible way to develop applications for different environments.

You won't need to rewrite any code you've developed using Developer Studio once you're ready to deploy. Simply migrate to the full license and reuse your existing code.

Developer Studio Contents

.NET Products

- Grid FX
- Chart FX 7
- Chart FX for .NET 6 2
- Pocket Chart FX for .NET
- Chart FX Gauges
- Chart FX Extensions Pack
  * Chart FX OLAP
  * Chart FX Financial
  * Chart FX Maps
  * Chart FX Statistical

COM Products

- Chart FX for COM
  - Chart FX Internet
  - Chart FX Client Server

Java Products

- Chart FX for Java 6 5
  - Chart FX Maps
  - Chart FX Statistical
  - Chart FX Gauges

Frequently Asked Questions

Question:
How is Developer Studio different than the fully-licensed versions of any of the Chart FX and Grid FX Products?

Answer:
Any product included in Developer Studio is a development-only product. In order to deploy your project, you must migrate to the full version of the particular product. Please view the Developer Studio Comparison Chart to see how Developer Studio fits into the Software FX product line.

Question:
Can I buy a license of Developer Studio ($499) instead of buying a more expensive Development Seat ($899) for Chart FX 7?

Answer:
You can, but you will be limited to viewing your page on the development machine only, rather than over an internal network as the Development Seat allows you to do. If you have further questions, please review this document.

Question:
What happens when I'm ready to deploy the application I've developed in Developer Studio?

Answer:
It is necessary to purchase the full license of the product you're using before you deploy your application. When you are ready, you can migrate from Developer Studio to a full version of the product(s) you've used using a migration path.

Question:
Am I forced to install the entire product line, even if I only need certain products?

Answer:
No. Developer Studio allows the developer to install only the components that fit the specific development requirements. So you can install as few or as many components as required by the project.

What is DiagramStudio?

Diagram Studio is a powerful application for creating professional-looking business, technical drawings and illustrations for your documents quickly and easily. Diagram Studio is the ideal program for creating a wide variety of flow charts, organization charts, presentation drawings, and diagrams. Specifically, Diagram Studio can produce:

- Business diagrams, presentations and illustrations
- Organization and workflow charts
- Software and process flowcharts
- Database structures
- Engineering schematics and technical drawings
- Web-site structures and network diagrams
- CAD drawings
- Research layouts and maps
- Floor plans, street and directional maps, traffic routings.

Who needs DiagramStudio?

DiagramStudio's ease of use makes it particularly suitable for users who need to create professional-quality drawings quickly and easily. This program was specially designed for a wide range of users of various skill level and job responsibilities, including:

- Manager and businessmen
- Database and Web designers
- Programmers and software engineers
- IT specialists and graphics designers
- Student and educators
- Scientists and engineers

and all whose who need to create professional-quality drawings.

Why DiagramStudio?

Diagram Studio offers you a wide choice of different tools which allow you to quickly and easily create flowcharts, business and technical diagrams, schemes, plans, family tree, etc. The focus of these tools is on ease-of-use, speedy results, automation, and quality output.
It's easy to draw and edit charts with Diagram Studio. You don't

need to have any artistic talent or drawing skills to use this program. The simple objects can be easily created by using primitive graphic components, and for more complicated ones you can use our Libraries, supplied with the program, where most of the objects you might need are already gathered for you. Simply drag them from there and drop into your diagram. Diagram Studio includes many ready-made symbols that are carefully organized into Libraries designed for specific tasks. For each symbol, you can assign different line colors, pattern, fill and shadow colors. You can enter explanatory text label at any location. Text is entered and formatted just like your word processor does it.
Diagram Studio's intelligent links automatically change their path when you reposition objects, avoiding crossing other objects. Powerful grid and alignment aids keep your diagram attractive. Diagram Studio handles the hard parts of drawing a diagram and leaves you time to focus on the layout and appearance.
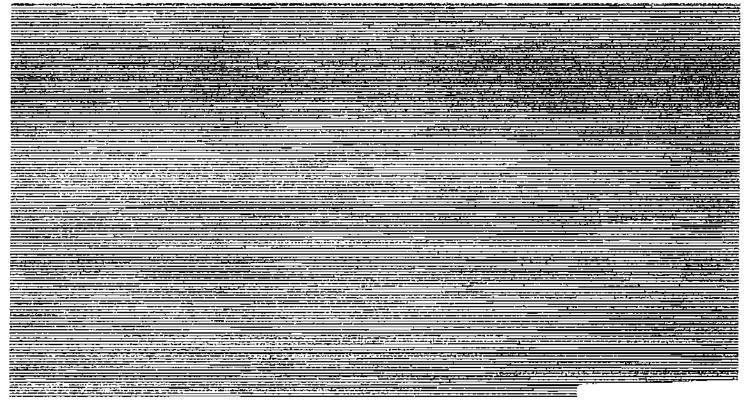

If you're new to DiagramStudio, you may need help getting started creating your diagrams. The lessons in Quick Tutorial teach you the basic skills you need to create any simple DiagramStudio diagram. Click here to to begin the tutorial.
System Requirement.

Diagram Studio requires Microsoft ® Windows 98/NT/2000/Me/XP/2003/2008/Vista. If you are running any of these operating systems and have a Windows-compatible mouse or pointing device, your system has already met all the requirements necessary to run Diagram Studio. A full installation of Diagram Studio requires only 16 megabytes of hard drive space. Diagram Studio has complete printer and plotter support.

EiffelStudio
A Complete Integrated Development Environment

▲Download now!

Overview

While Eiffel is widely regarded as the best language for creating fast, robust, scalable applications, EiffelStudio™ is the only tool for realizing the full power of the Eiffel Development Framework™.

EiffelStudio is more than just an IDE.

Imagine being able to model your system as you think - capturing your requirements and your thought processes with EiffelStudio. When you are ready to design, you build upon the model you just created, still with EiffelStudio. And then you implement with EiffelStudio. You never need to throw anything out and start over. You don't need extra tools to be able to go back and make changes in architecture safely. Roundtrip engineering? It's built in by design. Testing, metrics and productivity tools? They're built in. As a result EiffelStudio accommodates efficiently new thoughts on supporting business change fast and flexibly.

And debugging? Eiffel's native Design by Contract™ prevents 90% of the bugs from ever occurring in the first place - and what bugs remain are easily traced and repaired.

If you have multiple platforms to consolidate, reconcile or communicate with, no problem. EiffelStudio runs on Windows,

Unix, Linux, embedded, and even VMS systems. You can create an application in Eiffel (even importing your existing applications as a starting point), and then migrate it to any other platform Eiffel compiles to.

EiffelStudio is available under a <u>Dual Licensing model</u>. Users can choose either commercial or Open Source licensing.

EiffelStudio for Windows

EiffelStudio is the most powerful development environment for creating mission critical applications for the Windows operating system. In addition, if you are considering a move to .NET from some other platform, chances are that EiffelStudio will allow you to do it 10 times more easily and safely. You'll be able to reuse much of your existing applications and you'll be able to 100% verify the function of your new applications both on your present platform and your new platform in parallel, before flipping the switch.

EiffelStudio for Linux/Unix

EiffelStudio on these platforms offers all the powerful features of Eiffel Development Framework including Design by Contract™, multiple inheritance and Genericity. With EiffelStudio for Linux/Unix, developers have the freedom to create the most robust, scaleable applications and can easily port these applications to the platforms of their choice thus enabling them to consistently deliver measurable business results.

Eiffel for VMS

Given the general level of reliability and excellence of OpenVMS, Eiffel Software has considered that this platform and Eiffel would be a "perfect match." Eiffel Software has offered early on a version of EiffelStudio for VMS and is committed to continue support it for the benefit of its customers working on mainframe computers.

EiffelStudio for Macintosh

Since the release of EiffelStudio 5.4 onwards we are also providing a version for the Macintosh Platform. The Mac OS X version has all the power and robustness that you have come to expect from EiffelStudio and now Macintosh developers have the ability to use Design by Contract™ and multiple inheritance.

EiffelStudio for Embedded Systems

Because of EiffelStudio's simplicity, it is ideal for the embedded developer. Industrial machines, automobiles, medical equipment, cameras, household appliances, airplanes, vending machines, as well as the more obvious cellular phone and PDA, are among the myriad of possible hosts for an Eiffel embedded system.

EiffelStudio for Cloud Computing

EiffelStudio is a solution of choice for Cloud Computing applications. Deploy your application on a server and enable clients to access it remotely, gaining all the advantages of Eiffel's scalability and its unique Design by Contract mechanisms. Deploy services in data centers and offer them "on the cloud" to users worldwide; deploy new services incrementally through planned evolution.

The IT industry is moving en masse to Cloud Computing for cost-effectiveness, flexibility, and environmental friendliness. EiffelStudio helps you be on the forefront of this exciting new development.

Whatever platform you choose to operate on, EiffelStudio empowers developers to enjoy the following advantages.

- The simplest, most powerful language available
- Ensures robust, efficient software with Design by Contract™
- The only language to enable developers to use a clean Genericity and Multiple Inheritance model
- Reduces debug time by 90-95% with Design by Contract™ and a powerful debugger
- Compiles to multiple platforms, including: Windows (Classic and .NET), Unix, Linux, VMS, embedded systems and Mac OS X
- Works great as a tool to:
  - Create serious, high-quality software
  - Migrate legacy applications to .NET
  - Create high quality components and libraries, or increase the quality of existing ones, using Design by Contract™

Pricing for the Windows, Linux, and Mac versions of EiffelStudio is US$ 5,999.00 per license.
Pricing for the Unix and VMS versions of EiffelStudio is US$ 8,999.00 per license.
One year of Maintenance and Priority Support is included with each purchase. Additional support programs are available here.

The GNAT Programming Studio

What is GPS?

GPS, the GNAT Programming Studio, is a cutting-edge Free Software IDE that streamlines the interaction between developers and their software. With its intuitive interface, GPS is easy to use, simplifying source navigation and highlighting the fundamental ideas in the program.

By displaying core application structures, such as call graphs, program entity graphs, and project dependencies, GPS facilitates the development of systems. GPS helps construct reliable code while providing the same interface and behavior across a variety of platforms. Designed by programmers for programmers, GPS is a new kind of IDE that offers the experience of designing software in a uniquely comfortable environment.

Latest Libre site release

The latest GPS version (4.3.1) can be downloaded as part of the GNAT GPL Edition.

Features and Tools

Features

- Developer-friendly
- Multi-language
- Multi-platform
- Same modern GUI available on all platforms
- Flexible MDI (multiple document interface)
- Customizable
- Extensible: can integrate preferred tools
- Free Software

Tools

- Language-sensitive editor
- Automatic generation of body files
- Source code reformatting
- Intelligent source code navigation
- Context-sensitive search and replace
- Application builder
- Automatic code fixing
- Version control (CVS, ClearCase, etc.)
- Visual file comparison
- Graphical source-level debugger
- Project and program entities explorer
- Project wizard
- Types and program entities graphs
- Call graphs
- File dependency graphs
- Project dependency graphs

Online Documentation

GPS comes with a tutorial that gives an overview of the functionalities by going through a complete session, and a User's Guide documenting each tool and modules.

- GPS Tutorial
- GPS User's Guide

Mailing lists

GPS has two mailing lists.

- To subscribe or get information about the GPS developers list.
- To subscribe or get information about the GPS users list.

Access to the latest snapshot using SVN

The GPS repository is accessible read-only by anonymous SVN. Note that you should only use the GPS svn tree if you know what you are doing and if using a development version (with possible unstabilities) does not frighten you. To check it out:

```
svn co --ignore-externals http://svn.eu.adacore.com/anonsvn/Dev/trunk/gps
cd gps
svn co http://svn.eu.adacore.com/anonsvn/Dev/trunk/templates_parser
```

You can also browse the repository directly.

Snapshot binaries are also available.

If you would like to contribute, send your patches (contextual or unified diffs) and we will work with you on integrating them. If you have already contributed and would like write access to the tree, please contact us.

Autodesk Green Building Studio

Web-Based Energy Analysis Software

Autodesk® Green Building Studio® web-based energy analysis software can help architects and designers perform whole building analysis, optimize energy efficiency, and work toward carbon neutrality earlier in the design process. With faster, more accurate energy analysis of building design proposals, architects and designers can work with sustainability in mind earlier in the process, plan proactively, and build better.

* Whole building energy analysis software—Determine virtual building's total energy use and carbon footprint
* Design alternatives analysis—Consider alternatives to improve energy efficiency
* Detailed weather analysis—Extensive weather data available for project site
* Carbon emission reporting—Emissions reporting for nearly all aspects of the building
* Daylighting—Qualification for LEED® daylighting credit
* Water usage and costs—Estimated water use, in and outside building
* ENERGY STAR® scoring—Scores provided for each design
* Natural ventilation potential—Summarizes mechanical cooling required and estimates hours design could use outdoor air to cool the building naturally

IBM® Data Studio provides foundational database development and administration support for the DB2 and Informix family of products

Data Studio provides developers and DBAs with basic capabilities for database management and development at no charge for DB2 and Informix.

- Create, alter, and drop objects, manage privileges, view data distributions, and update statistics on those objects.
- Invoke enhanced administration support for DB2 on Linux, UNIX, and Windows including commands, utilities, and configuration support for pureScale databases.
- Simplify query building and editing, including support for XQuery.
- Speed data development with wizards and editors to create, test, debug, and deploy routines, such as stored procedures and user-defined functions.
- Create Web services that easily expose database operations (SQL SELECT and DML statements, XQuery expressions, or calls to stored procedures) to client applications.
- Install either a small, self-contained administration tool or a fully extensible platform for database development, administration, and tuning. For more information about these two downloadable packages, see Features and Benefits.

Microsoft
Visual Studio 2008 Shell

Introduction

IronPython Studio is a free full IDE (Integrated Development Environment) for the Python programming language. It is based on the existing IronPython example that is included in the VS SDK. IronPython Studio is based on the Visual Studio 2008 Shell runtime (royalty free) and can be installed without requiring any version of Visual Studio. It is available for Visual Studio 2008 Shell Isolated and Integrated modes.

For more information on VSX, visit the VSX Developer Center at http://msdn.com/vsx.

For IronPython general questions please use the http://lists.ironpython.com/listinfo.cgi/users-ironpython.com mailing list or the IronPython project http://www.codeplex.com/IronPython web site.

Everything you need to develop, test and deploy rich web applications, enterprise applications and SOA services.

JBoss Developer Studio Portfolio Edition provides a certified open source development environment that includes and integrates:

- Eclipse 3.5
- Eclipse based JBoss Tools 3.1
- JBoss Enterprise Application Platform
- JBoss SOA Platform
- JBoss Enterprise BRMS
- JBoss Enterprise Portal Platform
- JBoss Enterprise Data Services
- JBoss Operations Network
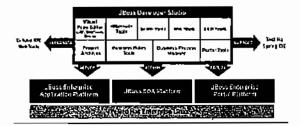

This integrated development environment provides developers everything needed to build rich Web and enterprise applications, and SOA services using technologies like:

- Hibernate
- JBoss Seam
- RichFaces
- JBoss jBPM
- JBoss ESB
- JBoss Portal
- JBoss Drools

Additionally, because JBoss Developer Studio Portfolio Edition includes both certified visual tooling and a runtime platform that Red Hat supports for 5 years, developers can have confidence that their development environment and platform is:

- Stable
- Upgradeable
- Deployable
- Supportable

Click to enlarge

JBoss Developer Studio Portfolio Edition is available as a subscription for use by individual developers for development purposes. JBoss Developer Studio Portfolio Edition also includes one entitlement to Red Hat Enterprise Linux, with built-in development tools, and Red Hat Network Access for development purposes.

JBoss Developer Studio is available for Windows, Linux and MacOS. JBoss Developer Studio can run on either JDK 5.0 or JDK 6.0.

Learn more about JBoss Developer Studio

- Read the datasheet (pdf)
- How to update JBoss Developer Studio from 3.0 to 3.x

Exadel Enterprise Web 2.0 Center for Excellence

Exadel and Red Hat have joined together to create the Enterprise Web 2.0 Center for Excellence to provide the services, training, and support for enterprises to capitalize on the promise of Web 2.0, AJAX4JSF, RichFaces, etc. in their Web applications. Using this broad range of services, training, and support, companies can cost-effectively incorporate the rich user-centric flexible nature of Web 2.0 into their enterprise applications.

Exadel is a leading professional services company providing business application development utilizing open source technologies. Exadel has earned the reputation as a Web 2.0 Center of Excellence specializing in developing rich Internet business applications.

Is your company ready to reap the benefits from Web 2.0 applications? For whitepapers, webinars, and customer case studies,

15:12:10 PM Thursday, September 16, 2010 http://www.redhat.com/developer_studio/   RS610

"Application development within the SOA-equipped enterprise has evolved significantly over the past two years, demanding a more eclectic and flexible arsenal of expertise and matching tools," said Brad Shimmin, Principal Analyst Application Infrastructure at Current Analysis. "Services and their underlying data must be considered together, as do cloud and premise deployments, as do rich internet applications and complex integrated services. JBoss Developer Studio 3.0 melds these disparate concerns using the agility of the Eclipse 3.5 platform and a broad quiver of supported frameworks that includes RichFaces, Seam, Spring, Struts and GWT."

✖ JIRA Studio Documentation

JIRA Studio

User's Guide

The JIRA Studio User's Guide is for project managers, developers, testers – anyone who uses JIRA Studio. New to JIRA Studio? Start by learning about the Projects Toolbar and how to navigate around in JIRA Studio. Try creating issues, drafting wiki pages, browsing the source repository, performing a code review and (if enabled) running a build. You can also create links between issues, wiki pages, source files, reviews and builds that you create.

Administrator's Guide

The JIRA Studio Administrator's Guide is for people with JIRA Studio administration rights. It will help you set up users and groups, applications and projects. You may want to customise the look and feel of your JIRA Studio instance. Account administration is also covered. You may also find the FAQs and JIRA Studio Forum useful.

Evaluator's Guide

If you would like to try out JIRA Studio, you can take the tour or try it out yourself by signing up for a free trial. The JIRA Studio 101 guide will help you get started using JIRA Studio.

Stay in Touch

Read the latest JIRA Studio News and keep track of the status of JIRA Studio. You can receive more news, product information and code tips via our newsletter and forums (JIRA Studio forum and JIRA Studio Announcements forum).
Have feedback regarding your JIRA Studio service? Please submit your feedback under the 'JIRA Studio' project here.
Alternatively, you may submit feedback via email to sales@atlassian.com.

KDE Studio: Powerful Development Tool for K Desktop Environment

Location / Home / Projects / KDE Studio / Overview

KDE Studio is an IDE (integrated development environment) for the K Desktop Environment (KDE). This page provides basic development information about KDE Studio, as well as user documentation and complete changelogs.

⊞ KDE Studio Requirements

- KDE 2.0
- Qt 2.2.1

Note: KDE Studio 2.0 is no longer actively developed and is not supported any more by theKompany. Our efforts are now focused on KDE Studio Gold and addresses all the common feature and documentation requests. KDE Studio Gold is actively developed and supported and is very reasonably priced. Any requests regarding KDE Studio will likely go unanswered.

⊞ KDE Studio News

2000.12.04

- final 2.0 version released
- updated download section

2000.06.07

- new developer version 2.0
- updated download section
- new CVS version available
- changelog updated

2000.03.30
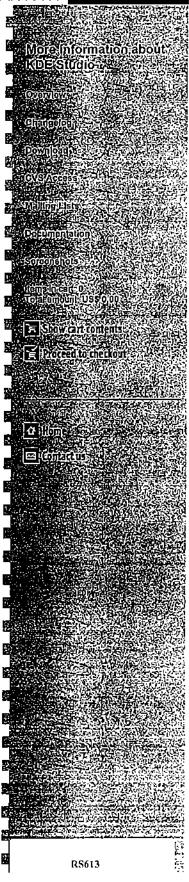

- updated download section
- new snapshot from 25 Mar 2000
- updated mailing lists
- new cvs repository with anonymous read-only access

2000.03.26

- Added KDE Studio page to TheKompany.com website
- Added documentation page, added function parameter screenshot

2000.02.20

- New snapshot: ONLY for KDE2 snapshots
- CodeCompletion plugin: function parameter detection added; fixed in created parent classes list in codecompletion dialog
- KWrite: fixed cursor color with colored background in text editor; fixed bookmark deleted when delete text line

RS613

- make disabled menu icon now in grayscale (was black/white)

⊞ Screenshots

- CodeCompletion plugins
- Function parameters

☯ Ufasoft

Ufasoft Common Lisp Studio v4.28

...mmon **Lisp** development system. Includes command-line ...d IDE Lisp interpreters. Possibility of creating EXE-files

Products

:: Wireless Snif
:: SocksChain
:: Dialer
:: P2P
Messenger .NET

Licensed under GPL

Ufasoft Common Lisp is fork of GNU CLISP implementation.

Open Source

:: Ufasoft Common Lisp Studio

Principal difference is that CLISP core implemented on C language. Ufasoft Common Lisp keeps most of CLISP's .lisp files unmodified, but reimplements the core on C++.

Welcome to Lua Studio

Lua Studio

Lua Studio is a simple IDE for scripting language Lua, including syntax coloring editor and an integrated debugger.

Installation

Copy binaries to any folder, for instance "c:\Program Files\LuaStudio". Click on the LuaStudio.exe to launch IDE.

If you don't have Visual Studio 2008 installed, you may need to download Visual C++ 2008 Redistributable Package from Microsoft's web site (C run-time libs, and more; it's a small package, below 2 MB in size).

Running Lua Program

When LuaStudio is up and running you can either start typing your new program, or load an existing one. When it's ready, click "Parse Document" icon or press F7. If there are syntactic errors status bar will show error message, and red marker will show up in the line containing the error. Fix it and press F7 again. Now your debugger session is open.

Debugging Lua Program

Each time F7 is pressed to parse current document, new Lua environment is initialized, and your program is loaded. It can be run by pressing F5, or traced step by step with Step Into (F11), Step Over (F10), or Step Out (Ctrl+F11). To toggle a breakpoint, press F9. When Lua program is running, its execution can be interrupted by pressing Ctrl+Break.

To inspect currently used variables, one can use local and global variables windows. Call stack shows active function calls.

To see program's output, please use In/Out Window (Alt+5).

Build Lua Studio

To build Lua Studio you will need VS 2008 IDE and Lua Studio sources available at the LuaForge CVS repository.

Source files include IDE sources, Lua 5.1.3, Lua File System lib (lfs), Scintilla (text editor), and Scintilla MFC wrapper.
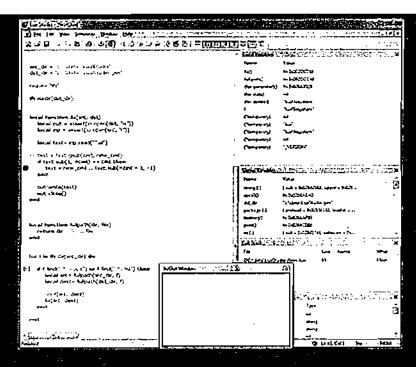

Apart from them MFC and STL files are needed (part of VS 2008 Professional installation), as well as boost libraries. Boost libs can be found here: www.boost.org. Lua Studio uses only header-based boost libraries, so nothing has to be built.

After opening solution file, simply build either Release or Debug configuration, and look for built executable inside Release or Debug folder respectively.

Limitations

This project is in alpha state (not feature complete). As such it is usable, but it has several limitations. In particular:

- There are no options to configure yet (editor font, colors, etc.)
- Local and global variables windows do not let you modify any values
- Call stack does not allow activating different frames
- Breakpoints are wiped out any time parsing is done
- Breakpoints are accepted in any line, even when it has no code (but they won't be hit there)
- Editing program while it is being executed messes up breakpoint and current line markers (press F7 to reparse

your program)

- Output window is very simple (not a real terminal window) and quite slow
- In/Out Window only functions in the output mode, and lacks configuration

Technical Notes

LuaStudio is written in C++ using MFC. The reason why MFC has been used, is simply due to the fact that I ressurected my old 6502 simulator program, instead of writing everything from scratch.

Lua binaries and lfs (Lua file system) have been both compiled as DLLs. In theory that allows using any Lua library, as long as it is compiled in VC 2008, with the same compiler settings.

Postgres Plus® Advanced Server v8.4 Now Available!

Postgres Plus Advanced Server is an enterprise grade database known for its HIGH PERFORMANCE FEATURES, MASSIVE SCALABILITY, and ORACLE COMPATIBILITY. Check out what's new...

New Core Features	New Oracle Features You Can Use In Any Application	Now with StackBuilder Plus
SQL/Protect guards against SQL Injection attacks	User Defined EXCEPTIONS	Easy add-on module management
Windowing Functions for BI reporting	Named Parameter Support	Update Monitor keeps add-on modules up to date!
Common Table Expressions & Recursive Queries	Private Synomym support	Customize your installations

Wait! There's lots more! Download the full Postgres Plus Advanced Server v8.4 Release Notes.

| OVERVIEW | FEATURES | ORACLE SUPPORT | FAQ | NEXT STEPS |

+ Performance and Scalability Features Including Infinite Cache!

Postgres Plus Advanced Server contains multiple performance and scalability features not found in the community PostgreSQL that are used for a wide variety of database tasks.

+ The Open Source Alternative to Oracle

With Postgres Plus Advanced Server's Oracle compatibility features you can run existing Oracle based applications on the Postgres platform. Don't use Oracle? No problem, you can still use the Oracle features like Query Hints, the high performance data loader, and more.

+ DBA Productivity Tools

Postgres Plus Advanced Server's suite of productivity tools addresses all the key functionality needed by serious database administrators and developers.

+ Developer Productivity Tools

Postgres Plus Advanced Server offers open source economics and the power programming features developers will find appealing and comparable to those found in the most popular commercial databases in use today.

+ GeoSpatial Support

The geospatial extension (PostGIS) built into Postgres Plus Advanced Server is an open source geographic information server.

+ GridSQL® with Parallel Query

GridSQL is a shared-nothing clustered database architecture targeted at data warehousing and data mart applications.

+ Database / Application Migration

The Migration Studio simplifies and automates the migration of Oracle, Sybase®, SQL Server® and MySQL® databases dramatically reducing the cost and risks of database migration.

+ Postgres Plus Replication

Postgres Plus includes the open source replication solution Slony-I enabling the replication of Postgres Plus and PostgreSQL databases.

EnterpriseDB is the enterprise PostgreSQL and open source database company, offering productized distributions of the PostgreSQL database, also referred to as the PostgreSQL database. EnterpriseDB has two distributions of PostgreSQL. Postgres Plus Standard Server is often used in MySQL migration efforts, and Postgres Plus Advanced Server is often used in Oracle migration projects and includes Oracle compatibility to cut Oracle costs. Visit the EnterpriseDB website to download PostgreSQL, to download PostgreSQL, or to inquire about PostgreSQL services or PostgreSQL services. EnterpriseDB, who employs PostgreSQL leaders including Bruce Momjian and Dave Page, is the leader in supporting PostgreSQL data and PostgreSQL data applications

Build Applications for your Enterprise or the Web, quickly and easily...
Omnis Studio is one of the most powerful and flexible Rapid Application Development (RAD) tools available today.

With Omnis Studio, independent or team-based developers can create enterprise or web applications for companies and organisations of any size.

Omnis Studio lets you develop and deploy applications under Windows, Linux and Mac OSX for such diverse markets as healthcare, human resources, publishing, customer relationship management, e-business, education, government, and more.

Using Omnis Studio, you can create form-based client applications that access all leading server databases, including Oracle, Sybase, DB2, PostgreSQL, MySQL, as well as JDBC- and ODBC-compliant databases such MS SQL Server.
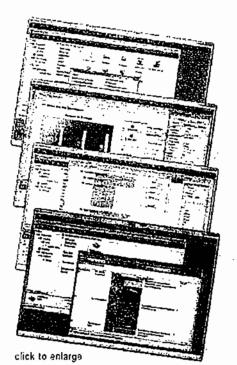

Omnis Studio is optimised for multi-tier and web-based application development: click on product features to read more about it, or click on Product Literature to download a brochure.

Download now!

Previously known as IBM Data Studio Developer, Optim Development Studio provides an integrated database development environment for Oracle, DB2, and Informix.

Optim Development Studio improves development productivity up to 50% for developing and testing SQL and XQuery queries, stored procedures, Web services, and Java data access layers.

- Generates a data access layer and test applications using Java objects, JSON, or, XML.
- Facilitates the use of JDBC and SQL data access best practices for enhanced performance.
- Enhances problem isolation, correlating problem SQL with issuing code even when using frameworks that generate the SQL.
- Simplifies impact analysis, visualizing the impacted SQL and source code for proposed schema changes.
- Leverages unique pureQuery software to deliver better performance, security, and manageability.
- Enhances cross-lifecycle collaboration to improve productivity, alignment, and application quality providing integration with additional Optim and Rational offerings.
- Extends heterogeneous data server support to Oracle with 2.2 in addition to IBM DB2 and Informix Dynamic Server on any platform.

Q++ Studio is the professional software system used by diary publishers worldwide to automatically create, update and customize diary and calendar dated pages, information and prelim pages, customer artwork, and diary-related data (public holidays for all the countries of the world, astronomical data, slogans and quotes of the day), to generate complete diaries in the QuarkXPress® file format. Q++ Studio is highly visual and user-friendly program, designed by diary professionals, for diary publishers. It is a mature, yet constantly evolving, product, used since 1997 to produce over 600 million diaries.

The Q++ Studio product presentation is available, free of charge, in Chinese, English, German, Italian, Japanese, Korean, Portuguese, and Spanish.

Q++ Studio automates the typesetting of diaries and calendars (one year to the next, multi-lingual, customized, ...). It uses your own QuarkXPress®, 2-page sample layouts, as input to generate diaries as industry-standard QuarkXPress® files (we support versions 3-4-5-6-7-8 of QuarkXPress).

Q++ Studio comes with a sample database of translations which contains translations of the terms found in dated diary pages (i.e. Monday->Sunday, January->December, Week, etc...) for over 50 languages. If there are terms missing from the supplied translations, or you need to use a language that is not in the sample database, then you can easily add your own translations and languages, or modify existing ones. Although there are additional complexities as one uses languages further and further away from Europe, over the years these have been identified and overcome, and Q++ Studio is currently being used successfully with all the languages required by our current users (*Afrikaans, Albanian, Arabic, Azeri, Basque, Bulgarian, Catalan, Chinese (Simplified), Chinese (Traditional), Czech, Danish, Dutch, Estonian, Filipino, Finnish, French, Gaelic, Galician, Gascon, Georgian, German, German (Austria), Greek, Gujarati, Hindi, Hungarian, Indonesian, Italian, Japanese, Korean, Languedoc, Latvian, Limousin, Lithuanian, Luxembourgish, Malay, Ndebele, North Sotho, Norwegian (Bokmål), Norwegian (Nynorsk), Polish, Portuguese, Provencal, Romanian, Russian, Sesotho, Setswana, Sinhala, Slovak, Spanish, Swazi, Swedish, Tamil, TshiVenda, Tsonga, Turkish, Ukrainian, Vietnamese, Welsh, Xhosa, and Zulu*).

The **Q++ Studio** sample database also includes the list of worldwide public holidays for all 195 countries of the world, as well as 48 other semi-autonomous territories, used by most of the main diary publishers of the world. Users can use these holidays "as is", or they can use Q++ Studio to modify and expand this list (changing the names of some holidays, adding or removing some of the holidays, adding new countries, ...). This database is made up of rules (such as : *Good Friday = 2 days before Easter*) so, in principle, you can use the current

database, and Q++, to immediately calculate world holidays for the next 100 or 200 years. However, in real time, the rules for celebrating holidays do change; some are added, some are removed, some are renamed, ... Therefore, the rules that are contained in this sample database are entirely reviewed every summer and a new updated version of this database is available in September. This new sample database can then be imported into your Q++ system automatically. During the year, if we find any errors, we of course advise our users immediately, and propose an appropriate patch.

Q++ Studio also makes it easy to display slogans and quotes of the day, either as text or images, based on either a repeating sequence (for example, *repeat a series of 25 quotes until the end of a diary*), or on repeating dates every year (for example, *on January 10, every year*), or based on specific dates (for example, *on January 10, 2005, only*).

Q++ Studio also automatically calculates and inserts into diaries astronomical information such as sunrise/sunsets, moon phases, moonrise/moonset, equinoxes, solstices, zodiac signs, seasons, and most information that can be found in ephemerides. Our calculations are based on the DE406 numerical integration package of the NASA-JPL and agrees to within seconds with online resources such as the JPL or the USNO.

All training is on-site, at your office or factory, and is provided by a member of the Q++ Studio development team. Training is available in English, German, French or Spanish. Technical support questions are also addressed directly, by a member of the Q++ Studio development team, from about 5:00 to 22:00 GMT every day, 365 days a year.

More sources of information are available:

- **PDF presentation of Q++ Studio**: This full-color, 36 page, presentation presentation is available in Chinese, English, German, Italian, Japanese, Korean, Portuguese, and Spanish. You can also ask for a printed copy to be mailed to you (simply contact us including your street address in your email, and specifying the language in which you wish to receive the presentation).

- In the Q++ Studio Online Documentation.

- In web-based self-running demos.

- In our pages of worldwide listing of public holidays and date-related freeware.

For additional information, please don't hesitate to contact us.

REAL Studio
An Introduction

"Love your software and your company! Keep up the great work!"

- Michael Vollmer

See what others are saying -

1. Easy To Learn

Because REAL Studio provides drag and drop interface building, you can get a lot of your development without writing any code at all. You can learn incrementally which means you can start making progress on your application right away.

2. Quality Applications

REAL Studio provides native interface controls to give your apps the best, most native experience possible. REAL Studio also compiles your code to native machine code for fast execution and to protect your intellectual property.

3. Fast Development

Our drag and drop interface building combined with a modern, object-oriented language that abstracts you from the OS details makes for extraordinarily fast development.

4. No Limits

With built-in support for graphics, database servers, internet protocols and more, you can build just about anything you can imagine.

"REAL Studio lets me bring my ideas to life quickly, cross-platform, and with professional looking results."

- Brad Hutchings

"I love REAL Studio! With it I can quickly create software while eliminating all of the basic UI code."

- Nathan Warden

"Love you guys - what a product! You're hard work now feeds my family!"

- Jeff Ayling

Course description: IBM Cognos 8 BI Report Studio: Introduction (V8.4) - eLearning

Order now

Add to my training plan

Overview

- Special note
- Audience
- Prerequisites

- Skills taught
- Course outline
- Machine requirements

Course code B2425	**Delivery type** Web Based Training		
Duration 0.8 days	**Course type** Public only		
Public price USD $199.00 plus tax			

This eLearning offering is a Web-based Training (WBT). IBM Cognos WBTs are interactive multimedia modules that are intuitive and instructionally sound. Through visual content and audio, product demonstrations, hands-on learning activities, and simulation-based assessments and quizzes, the modules guide the students to mastering an IBM Cognos application.

The IBM Cognos 8 BI Report Studio: Introduction (v8.4) WBT covers basic report building techniques, and how to enhance, customize, and manage professional reports in Report Studio. Through interactive learning activities you will learn the report building process and basic report management.

View this course in other countries

Training Paths that reference this course are:

- Metrics Engineer or Report Author (Rational Insight)
- IBM Cognos 8 BI – Professional Author Role
- IBM Cognos Express 9.0 – User Role

Special note

IBM Education Advantage Program eligibility:

RS638

- Yes - IBM Education Pack - online account

Audience

This course is intended for Business authors.

Prerequisites

- Knowledge of your business requirements
- Experience using basic Windows functionality
- Experience using a Web browser

Skills taught

Please refer to the Course Overview for description information.

Course outline

Introduction to the Report Authoring Application

- Identify the basics of Report Studio
- Create simple and express reports
- Create reports using data sources

Create List and Crosstab Reports

- Create list reports
- Create crosstab reports

Present Data Using Charts and Maps

- Create and format chart reports
- Create and format map reports

Focus Reports Using Filters and Prompts

- Focus reports using filters
- Focus reports using prompts

Machine requirements

System Requirements:

- Pentium III
- 128 MB RAM
- Free Space - 400-450 MB approximately
- 1024 X 768 screen resolution
- Windows 2000, XP, Vista installed on your computer
- Sound card
- Internet Explorer 6.0, 7.0

- Firefox 1.5, 2.0
- SCORM 1.2 compatible
- Macromedia Flash Player 6.0, 7.0, 8.0 or 9.0. Flash Global Security Setting must be set to allow Flash content to use older security rules
- Minimum color depth/quality (monitor settings) of Medium (16-bit)

New R3 Version Available

The Microsoft® Robotics Developer Studio 2008 R3 (Microsoft RDS) is a Windows®-based environment for academic, hobbyist, and commercial developers to easily create robotics applications across a wide variety of hardware. All previous editions of Microsoft RDS 2008 R2 (Express, Standard and Academic) have been combined into one new version, RDS 2008 R3 and can be downloaded at no charge.

The Microsoft CCR and DSS Toolkit 2008 R2 is no longer available as a standalone product and is now included for no charge with RDS 2008 R3.

RDS 2008 R3 includes a lightweight asynchronous services-oriented runtime, a set of visual authoring and simulation tools, as well as templates, tutorials, and sample code to help you get started.

RobotStudio Overview

Offline programming using the Virtual Robot Technology is just like having the real robot on your PC!

Offline programming is the best way to maximize return on investment for robot systems. ABB's simulation and offline programming software, RobotStudio, allows robot programming to be done on a PC in the office without shutting down production. It also enables robot programs to be prepared in advance, increasing overall productivity.

RobotStudio provides the tools to increase the profitability of your robot system by letting you perform tasks such as training, programming, and optimization without disturbing production. This provides numerous benefits including:

- Risk reduction
- Quicker start-up
- Shorter change-over
- Increased productivity

RobotStudio is built on the ABB VirtualController, an exact copy of the real software that runs your robots in production. It thus allows very realistic simulations to be performed, using real robot programs and configuration files identical to those used on the shop floor.

SAS/IML® Studio

SAS/IML Studio is new software for statistical programming. It provides a highly flexible programming environment in which you can run SAS/STAT or SAS/IML analyses and display the results with dynamically linked graphics and data tables. SAS/IML Studio is intended for data analysts who write SAS programs to solve statistical problems but need more versatility for data exploration and model building. The programming language in SAS/IML Studio, which is called IMLPlus, is an enhanced version of the IML programming language. IMLPlus extends IML to provide new language features, including the ability to create and manipulate statistical graphics, call SAS procedures as functions, and call computational programs written in C, C++, Java, and FORTRAN. SAS/IML Studio also provides the capability to interface with the R language. SAS/IML Studio runs on a PC in the Microsoft Windows operating environment.

SAS/IML Studio is distributed with SAS/IML software.

Server Studio™ is a comprehensive, multiplatform tools suite for IBM® Informix® databases.

Server Studio enables database administrators and developers to improve the efficiency of daily database tasks such as application development, schema and storage space management, performance monitoring and optimization, event response management and server maintenance. In addition, Server Studio:

- Enables you to maximize the availability, performance and manageability of your entire IBM Informix infrastructure from a single point of control, regardless of whether your database servers are in one location or at remote sites.
- Simplifies complexities of managing data servers with a highly-intuitive graphical console which provides a powerful set of seamlessly integrated, system management tools that minimize error-prone, time-consuming, command-line-driven administrative tasks.
- Helps keep your database servers performing at peak levels with an extensive assortment of wide-ranging analytical tools to diagnose and respond to performance and availability problems in real time.
- Improves efficiency of data storage resources utilization by performing database reorganization and restructuring with minimal application downtime, comprehensive space management and data capacity planning facilities.
- Provides comprehensive configuration auditing and change management solution for data servers to preserve your database investment.
- Is available in several editions (link resides outside ibm.com) for added functionality to meet your specific needs.
- Was developed by AGS Ltd (link resides outside ibm.com). in close cooperation with IBM.

Smalltalk Studio

work smarter
work faster

Product Description

Smalltalk Studio gives you the tools you need to rapidly develop high quality Smalltalk objects in an intuitive and responsive environment. It combines the power and flexibility of an object-oriented graphical user interface with the immediate feedback of *real-time* software quality metrics.

> For in-depth information about *Smalltalk Studio*, browse the *Smalltalk Studio User Guide and Reference*.

A Powerful Graphical Environment

Smalltalk Studio speeds your development by extending the desktop metaphor of your operating system to the Smalltalk development environment. Powerful graphical views replace the standard text-based browsers. Smalltalk development leads you naturally from class to class. *Smalltalk Studio* gives you advanced navigation tools that make this simple.

Real-time Software Quality Metrics

Traditionally, software quality measurement has been part of the testing process. Fixing problems at this stage is time consuming and costly. *Smalltalk Studio* calculates and reports metrics in *real-time*, unobtrusively integrating software quality measurement into the code generation cycle.

Metric results are translated into simple color-coded accents that are added to object icons. These provide constant, visual feedback on the quality of the code and aid the refactoring process by spotlighting suspect objects. You are able to respond to problems as they arise and keep the focus on quality work, not just quick work.

The metrics selected for reporting are chosen to be meaningful to Smalltalk developers. They are not prescriptive, but act instead as heuristics to help you to identify anomalies in your design and make your code more reusable. Each metric focuses on a single aspect, making it easy to understand *why* a possible anomaly has been flagged and, using the Smalltalk Studio Help, *how* to correct it.

> *Smalltalk Studio's* graphical interface makes your development tasks easier. *Real-time* metrics give you immediate feedback on the fruits of your labor. By combining these features in a single product you will be sure to *work smarter and faster* with *Smalltalk Studio*.

SMS Studio

SMS Studio is the advanced and comprehensive application designed to facilitate communication through the Short Message Service.

SMS Studio is designed to support your business and promote your product or service. This unique SMS software gives you the power to run your own SMS events and services.

SMS Studio enables you to create an SMS gateway capable of routing SMS messages between your clients by using various SMS protocols. This way you can manage and distribute SMS services to your clients.

With **SMS Studio** you actually obtain completely stand-alone communication system. All you need is an SMS gateway account or a mobile device attached to your computer and you are ready to start.

SMS Studio enables you to exchange SMS messages with many types of Short Message Entities (SME). See **Account Types** for more details about all supported SME types.

In order to process SMS messages and help you create attractive SMS events, **SMS Studio** has a number of built-in services. See **Services** page for more details.

According to their purpose, **SMS Studio** products are divided into three editions. Visit **SMS Studio Editions** link to learn more about available editions.

If you need a custom set of components, please visit **Custom Solution** page.

Introducing: SQL Studio Data Compare

DataCompare

SQL Studio Data Compare is an advanced data comparison utility for Microsoft SQL Server databases that helps you visualize changes in your data and keeps your databases in sync. It is a high speed database comparison tool to analyze your data and to generate instant results. Whether you need help migrating test or development database to production, or want to keep two databases in sync, SQL Studio Data Compare is the right tool for the job. (More Info)

At a glance ...

- [NEW] Row filtering using a custom WHERE clause
- [NEW] Target database backup option before executing scripts
- [NEW] Date format option for output scripts
- [NEW] Custom templates for command line utility reports
- [NEW] Generate INSERT only statements for database dumping
- [NEW] Command line interface
- [NEW] Multiple server locations
- [NEW] Define custom primary keys
- [NEW] New comparison wizard and project definitions
- [NEW] Improved speed and performance
- [NEW] Improved user interface
- Compare all tables in two databases, or a selection of tables
- Color coding for differences
- Filter the data to show only differences
- Support for remote servers
- Powerful synchronization options for all rows, selected rows, selected columns
- Flexible options for comparing BINARY and NTEXT data using third-party diff tools
- Filters by rows and columns
- Data search by keywords
- In-place data edit

Supported Databases

- Microsoft SQL Server 2005 (all editions)
- Microsoft SQL Server 2005 Express
- Microsoft SQL Server 2000 (all editions)
- Microsoft MSDE 2000
- Remote Microsoft SQL Server instances

EMS SQL Management Studio 2010 for Oracle is a complete solution for Oracle database administration and development. With components that focus on all critical Oracle database management tasks, SQL Studio is a single workbench that provides you with *must-have tools for administering Oracle databases, managing database schema and objects* as well as for *Oracle database design, migration, extraction, Oracle query building, data import, export and database comparison.* SQL Studio unites these database tools for Oracle in one powerful and easy-to-use environment that can work round the clock. With SQL Management Studio many database administration objectives, such as migration, data loading and synchronization, database backup and extraction can be automated, allowing Oracle database administrators and Oracle application developers to perform complex tasks on a regular basis with the minimum number of efforts and a high level of flexibility. Whether you are a database or application developer, DBA or business analyst, SQL Studio for Oracle offers all essential Oracle tools to make you more productive than ever before!

SQL Management Studio 2010 for Oracle components

- **SQL Manager for Oracle** - Simplify and automate your *Oracle database development process*, design, explore and maintain existing Oracle databases, build compound Oracle SQL query statements, manage Oracle database user rights and manipulate data in different ways. Learn more »
- **Data Generator for Oracle** - Generate test data for Oracle database for testing purposes in a simple and direct way. Wide range of data generation parameters, user-friendly wizard interface and useful console utility to automate *Oracle test data generation.* Learn more »
- **Data Pump for Oracle** - Migrate from most popular databases (MS SQL Server, MySQL, PostgreSQL, DB2, InterBase/Firebird, etc.) to Oracle. Convert database schema and import table data to Oracle database from any ADO-compatible source. Learn more »
- **Data Import for Oracle** - Import data to Oracle database tables from MS Access, MS Excel, CSV, XML and other popular formats via user-friendly wizard interface. Learn more »
- **DB Extract for Oracle** - Create Oracle database backups in the form of SQL scripts, script and *save your Oracle database structure and table data* as a whole or partially. Learn more »
- **SQL Query for Oracle** - Analyze and retrieve your data, build your *Oracle queries visually*, work with Oracle query plans,

build charts based on retrieved data quickly and more. Learn more »

- **Data Comparer for Oracle** - Compare and synchronize the contents of your Oracle databases. Automate your data migrations from development to production database. Customize the *Oracle comparison and synchronization* process to suit your needs. Learn more »
- **DB Comparer for Oracle** - Compare and synchronize the structure of Oracle databases. Move changes on your development database to production with ease. Learn more »
- **Data Export for Oracle** - Export Oracle database data to any of 19 most popular data formats, including MS Access, MS Excel, MS Word, PDF, HTML, ODF and more. Learn more »
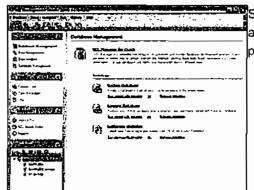

SQL Studio Additional Features

- Handy launch of utilities and services
- Storing all templates in a single repository
- Common data source list for all services and utilities
- Creating complicated tasks and scheduled tasks execution
- Ability to run external applications from scheduler
- Storing all task execution logs in one database
- Creating customized notifications with a variety of delivery options
- Ability to set visual interface style uniquely for all SQL Studio apps
- Fast access to EMS Technical Support Service

In-purchase benefits

- Acquiring a full set of must-have tools for only 50% of their regular price!
- FREE One Year of Maintenance already included!
- FREE software updates and upgrades during Maintenance period!
- FREE and unlimited Technical Support during Maintenance period!
- Reasonable pricing for Maintenance renewal -- from 20% per Year!
- Volume discounts when buying two or more copies of one product
- Cross-selling discounts on related products
- 30-day money-back guarantee

TCL Developer Studio

12.07.99. The version 1.0 is out!

Here you can read about second version of Tcl Developer Studio

5 penguins at LinuxBerg!

☒ LinuxBerg

Contents:

- About
- News
- Plans
- Implemented Features
- Known Bugs
- Screenshots
- Requirements
- Download
- Installation
- License

About

The main purpose of the TCL Developer Studio project is to create useful framework for working with TCL projects.

News

12.07.99. The version 1.0 was released.

- Only bugs fixed

Please, read whats.new file for details.

Plans

In next version (2.0) I plan to use BWidget instead of Tix.

Implemented Features

Editor:

- o Multi-file editor. Open, save, save as, and close operations are implemented.
- o Syntax indent.
- o Clipboard support.
- o Syntax highlighting (comments and keywords)
- o Different find and replace functions
- o Go to... function
- o Undo/redo

Files Tree:

- o Parse files and show procedures. You can use it for fast navigation in file.

Project Management.

- o Simple project managament implemented.
- o Project Settings dialog
- o You can specify different options for different platforms
- o You can Run your scripts from TCLDevStudio.
- o The standard and error outputs from your script will be redirected to the output window. (Works only under Unix)
- o Printing feature
- o You can call debuger from TCLDevStudio.

Known Bugs

- The output window does not works correctly under windows

Screenshots

- TCL Developer Studio under Linux and under Windows 98
- "Create New" dialog under Linux and under Windows 98
- "Options" dialog under Linux and under Windows 98
- "Project Settings" dialog under Linux and under Windows 98
- "Printer Options" dialog under Linux
- "Print File" dialog under Linux

Requirements

- TCL 8.0
- Tix 4.1. (Here you can download Windows version of Tix, compiled with Visual C++)
- a2ps for printing under Unix

It was tested on Linux/PC with TCL 8.04 and Tix 4.1 and Windows 98 with TCL 8.04 with Tix 4.1

15:29:25 PM Thursday, September 16, 2010 http://kakunin.chat.ru/tcldev/

Download

The Latest version is 1.0.

- Unix tar.gz: tcldev-1.0.tar.gz
- Windows zip: tcldev10.zip

Installation

Under Unix

Simply ungzip and untar it into any directory.Then put link to the tcldev.tcl into any directory in your PATH.

After it you can simple call tcldev.tcl

Under Windows

Simple unzip archive into the any directory

For running TCL Developer Studio use : <your tcl dir>\bin\wish80.exe <your TCLDevStudio dir>\tcldev.tcl

License

GPL

JavaGram 2.0 (Build 330 - 8 Mar 2010)
Download | White Paper | Complete User Guide | JADE Screen Shot

JavaGram is a new technology specifically designed to support agile development. As a language, it shares many of Java's features - syntax, platform independence, strong type checking, object orientation, and garbage collection - but also offers capabilities that make it a much easier-to-use and productive platform, such as declarative programming, automatic remoting, asynchronous method invocation, and dynamic loading.

JavaGram enables you to deploy a standalone or multi-tier client-server application from a single code base, allowing you to run your client in an Internet browser as well as a native desktop application. It manages the underlying complexities of distributed applications for you so that you can focus on what matters most: implementing business functionality. Furthermore, time consuming activities such as application maintenance and patching are significantly simplified through a server-centric release process that automatically updates all dependent deployment points.

The technology is simple and easy to learn; yet the benefits are overwhelming - up to an order of magnitude gain in productivity and robustness when compared to conventional technologies. JavaGram comes with a fully integrated Development Environment (IDE) called JADE that makes application development a breeze.

UMLStudio 8.0 (Build 840 - 16 Aug 2010)
Download | Release Notes | Screen Shots

UMLStudio is a widely-used UML modeling tool. Its features include:

- Industry standard **notations**: UML, Booch, Structured, etc.
- Extensive support for **UML 2.1** in UMLStudio 8.0.
- Support for **Java, JavaGram, C++, C#, IDL, PHP, Ada 95, Forte**
- Template-based, **user-defined** notation support
- Script-driven code/document **generation** and reverse engineering
- Fastest **reverse engineering** capability in the market
- User-defined **symbol libraries** and design patterns
- Support for popular **image formats**: bitmap, JPEG, PNG
- Capable of handling very **large models** (tens of thousands of classes)

Here is a small sample of what our clients say about UMLStudio:

- *"UMLStudio appears to be the most useful piece of software I've seen since a long time - and I've seen a lot. This product is so versatile and flexible, lean, mean and a must-have for any engaged software-developer"* (Klaus Zerbe, Germany)

- *"I've been evaluating your product, UML Studio. I am really impressed with what it can do, even in comparison to the high end (and high price) products like Rational Rose"* (Blake Thurston, USA)

- *"I just tried several UML products (including Rose, Rhapsody, Prosa, Magic Draw, With Class) and I just have to say that your product is honestly the best. It is lightweight, customizable and easy to use. Thanks for creating such great piece of software!"* (anonymous user, Finland)

UMLServer 2.0 (Build 265 - 16 Aug 2010)
Download | Release Notes | Screen Shots

UMLServer is a companion product, which allows you to deploy UMLStudio in a collaborative team environment. Its features include:

- Floating **license server**, which allows a limited number of UMLStudio licenses to be shared by a larger group of users.
- Allows **multiple users** to concurrently work on the same project.
- Provides a central, **shared repository** for storing UMLStudio projects.

WebSphere® Studio Application Developer Integration Edition extends and integrates your existing IT assets.

It maximizes your return on IT investments by creating reusable services out of your Web services, Java assets, back-end systems, packaged applications, people, and processes.

- Expands the reach of your existing systems using a broad portfolio of rich application and technology adapters
- Improves your IT responsiveness by leveraging a service-oriented architecture to build modular applications that are designed to adapt quickly to change
- Maximizes your developer productivity by quickly constructing new process-based applications using drag-and-drop development tools to visually coordinate the interactions between your software assets
- Allows you to anticipate change by using business rules to embed adaptable business logic into applications and business processes
- Minimizes your development, deployment, and administration costs by building on the industry leading, industry tested, industry supported WebSphere platform
- Protects your infrastructure investments and minimize training costs by developing applications using industry supported open standards
- Operating systems supported: Linux, Windows

Overview

Zend Studio is the only Integrated Development Environment (IDE) designed for professional developers that encompasses all the development components necessary for the full PHP application lifecycle. Through a comprehensive set of editing, debugging, analysis, optimization, database tools and testing Zend Studio speeds development cycles and simplifies complex projects.

Benefits

* Develop and maintain code faster: a powerful PHP editor with advanced code editing and navigation capabilities as well as Zend Framework integration allows you to create better code faster
* Find and resolve problems quickly: comprehensive PHP debugging, PHP profiling, built-in PHP unit testing and Zend Server integration provide seamless application monitoring and troubleshooting
* Improve team collaboration: use robust team-oriented features to improve collaboration between project members
* Leverage the latest technologies: the most up to date development environment gives you the ability to deliver advanced applications and a richer user experience

Features

* Zend Framework Integration
* Mylin Task Support
* Phar support
* PHP refactoring
* PHP code generation
* PHP Editor/File Management
* JavaScript support
* HTML & CSS support
* PHP debugging support
* Zend Server integration
* PHP unit testing
* Remote development support
* Database connectivity support
* Source control support
* Zend Studio 5.5 migration tools
